Modernization

There is normally more than one reason for modernizing your plant: In addition to extending the lifecycle through a secured supply of spare parts, you can upgrade the system to reflect the latest state of the art technology. Improvements in safety, energy efficiency and performance also have to be achieved.

We offer you a professional and cost-optimized view. On the basis of our many years of experience, we provide expertise that will give you an overview of the investment that is needed for modernization

- Increase in melt output
- Conversion of furnace systems to the latest furnace safety standard

- Rapid change device at pouring furnaces
- Conversion of the cooling system with heat recuperation
- Conversion of LF supply to crucible furnaces to MF
- Modernization of the outdated system control to a new Siemens PLC
- Extraction hoods for all furnace systems
- Modernization of automatic pouring control systems
