

EASY REMOTE ACCESS TO SYSTEMS

Dear ladies and gentlemen,

secure a way to easily access your plants remotely by switching to Industrial Remote Communication now and benefit from the digital ABP services. The advantage of the combination of ABP digital Expert on Demand (dEoD) and SCALANCE network components from Siemens: if the worst comes to the worst, ABP will be with you immediately.

The ABP experts will give you all the details and background information in this episode of the ABP Podcast on Industrial Remote Communication - listen now (in german)!

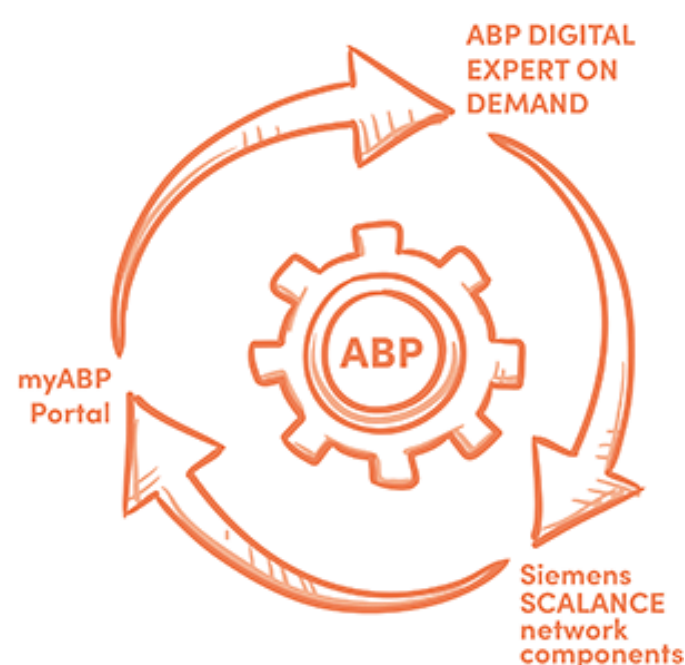

Good to know: In the future, ABP Induction, in combination with Siemens technology, will offer the ideal remote network connection via dedicated line, phone, mobile connection or Internet - whether wired or wireless, IP-based or analogue.

The network components protect networks and the communication between them from unauthorised access and data piracy. In addition, the SINEMA Remote Connect management platform enables secure and simple administration of communication connections.

Your greatest advantage: You are now ready to start using our extensive remote services. In the future, ABP Service will support you in service cases via Augmented Reality and can solve technical problems remotely so that your systems do not stand still. Everything is recorded in the portal myABP, so that you have an overview of all your machines and plants at all times. So keep up with technical progress now and secure not only the latest network technology from Siemens, but also the digital competence of ABP.

Do you have any questions? Contact ABP now and request a non-binding demo!

The Industrial Remote Circle from ABP: Book your package directly.

On the safe side with ABP digital Expert on Demand (dEoD): If you have already technically upgraded to the latest router generation, you can benefit directly from the digital services of ABP. Ask now for our attractive conditions for remote service access to your systems!
